**Well Bird Checkup Package- July 2022**

Packaged for the mature parrot, as a comprehensive health screen. Also useful for the newly acquired parrot. When scheduled as a checkup visit, special pricing is extended when compared to a sick bird visit.

The package includes a comprehensive hematology and chemistry panel, checking cell counts, liver, kidney, blood sugar, fats, and nutritional markers. A bacterial culture and sensitivity is run, checking for latent infections, which are more concerning in birds with a history of malnutrition.

**Including the Specialist Exam Visit, the above tests are offered at \$299.00, a 20% discount over sick bird expedient testing.** These tests are run in Dr. Fudge's laboratory and are very competitive with what a full-service hospital would charge for big lab send out submissions.

Add-ons can include: **DNA sexing \$70.00**; a test that is valuable for medical history.

Adding a **Chlamydia DNA** or **Beak & Feather Disease (PBFD)** DNA costs \$75.00 each

Adding all three DNA tests and the checkup package costs \$519.00

Chlamydia testing is recommended on all new birds; PBFD testing is recommended on all new Old World parrots.

\*\*\*. \*\*\*

*\*Note all of these tests are for household pet birds. Mostly a whole different set of diagnostics are used with poultry and waterfowl.*
